Sufficient quantities of personal protective equipment at the Centre intégré de santé et de services sociaux de Laval

Laval, April 28, 2020 – The Centre intégré de santé et de services sociaux (CISSS) de Laval takes daily inventory of the personal protective equipment and has sufficient quantities available to protect employees, users and partners. As a reminder, inventory management is ensured by the Ministère de la Santé et des Services sociaux (MSSS), which sends equipment every day, based on the needs of the organization. Employees and users should not be misled by the distribution of alternative personal protective equipment intended for personnel.

All stakeholders of the health network, including the CISSS de Laval, have implemented a strict management system for personal protective equipment to ensure its judicious use. The CISSS de Laval does regular follows-up to make sure that a sufficient quantity of quality personal protective equipment is available, where it is needed. All decisions made regarding user safety and the delivery of care are based on scientific evidence. In addition, all measures implemented to ensure the safety of our employees are dictated by the Institut national de santé publique du Québec (INSPQ), in concert with professionals of the infection prevention team of the CISSS de Laval.

At the CISSS de Laval, the safety of employees is non-negotiable.
